

What are very large files?

We all struggle publishing, sharing, sending and transferring very large files. Emails bounce due to mailbox and file attachment size limits. These limits are generally reached with files of 10MB or less. Burning CDs and sending them via express courier is ineffective and time consuming. Flash drives are more efficient but they are expensive and you still have to send them. FTP servers require creating accounts and setting authorizations which is inadequate for ad-hoc transfers by casual users.

What is Velodoc?

Velodoc is Memba's solution to publishing, sharing, sending and transferring very large files. You can get Velodoc either as a software product which you install on your servers or as a fully managed hosted solution which you can try for free.

You only need your Internet browser and the email address of a recipient to send very large files using Velodoc. Files are uploaded to the Velodoc server which takes care of sending the email which contains secure download hyperlinks to the recipient. We regularly release plug-ins and add-ons to streamline and integrate this process with various applications including Microsoft Outlook.

How will you benefit?

With Velodoc, you experience a user-friendly interface to streamline the transfer of very large files. By avoiding bouncing emails and CD burning, your improve productivity and reduce delivery times. You can remove your FTP servers and maintain low size limits on your mailboxes and file attachments to mitigate security risks. Velodoc helps you improve visibility and increase control with an audit trail of very large file transfers. You are given the choice between the peace of mind provided by a fully managed hosted solution or the power of customizing Velodoc to your specific needs.

Client Requirements

Internet Explorer 6+,
Firefox 1.5+, or
Netscape 8+

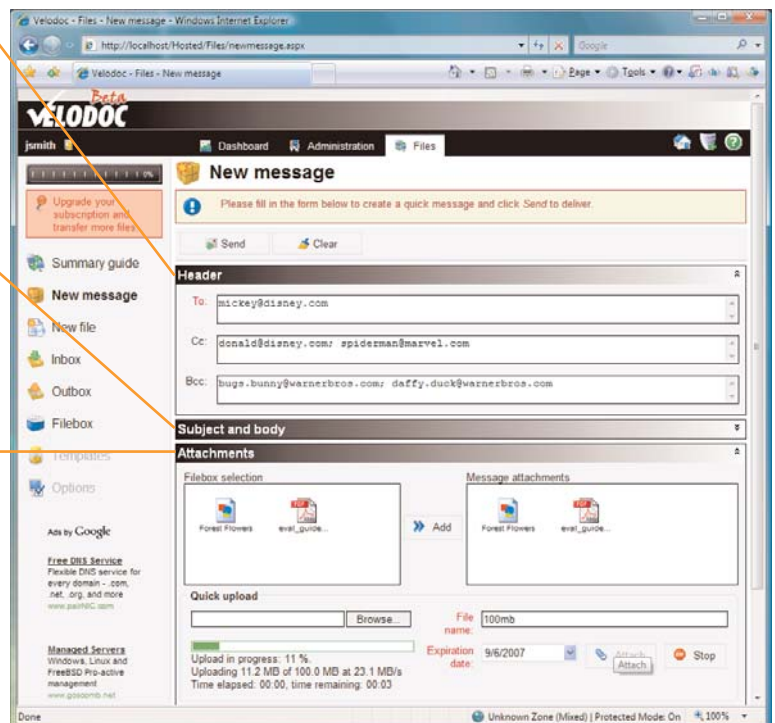

Server Requirements

Windows Server 2003
SQL Server 2005
.NET Framework 3.0
